## Lecture 13, 14

## Population Ecology

### 1.018J

## 2009

The next three lectures

* Growth under unlimited conditions
* Resource limited growth
* Age- structured populations - "life tables"
* Human Population Growth

## How do you measure the size of a population?

## QUADRATS

$$
\begin{array}{|lllllllll|}
\hline \bullet & \bullet & \bullet & \bullet & \bullet & \bullet & \bullet & \bullet & \bullet \\
\bullet & \bullet & \bullet & \bullet & \bullet & & \bullet & \bullet & \bullet \\
\bullet & \bullet & \bullet & \bullet & \bullet & \bullet & \bullet & \bullet & \bullet \\
\bullet & \bullet & \bullet & \bullet & \bullet & \bullet & \bullet & \\
\bullet & \bullet & \bullet & \bullet & \bullet & \bullet & \bullet \\
\bullet & \bullet & \bullet & \bullet & \bullet & \bullet & \bullet & \bullet & \bullet \\
\bullet & \bullet & \bullet & \bullet & \bullet & \bullet & \bullet & \bullet & \bullet \\
\bullet & \bullet & \bullet & \bullet & \bullet & \bullet & \bullet & \bullet \\
\hline
\end{array}
$$

## UNIFORM DISTRIBUTION

| 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 |

## RANDOM DISTRIBUTION

$$
\left.\begin{array}{|cccccccccc}
\hline & 0 & & 0 & & 0 & 0 & 0 & 0 & 0 \\
0 & 0 & & 0 & 0 & 0 & & 0 & 0 & 0 \\
0 & 0 & 0 & 0 & & 0 & & 0 & 0 \\
0 & & & 0 & & 0 & 0 & & 0 & \\
0 & 0 & & & 0 & & 0 & 0 & 0 & 0 \\
0 & 0 & 0 & 0 & & 0 & 0 & & & \\
0 & & 0 & 0 & 0 & & 0 & 0 & 0 & 0 \\
0 & 0 & 0 & 0 & 0 & 0 & & 0 & 0 & 0 \\
0 & 0 & 0 & 0 & 0 & & 0 & 0 & 0 & 0
\end{array} \right\rvert\,
$$

## CLUMPS

quadrat size has to be very large for clumped distrubutions

## Step 2: Release and wait

Step 3:
Capture S individuals in second sampling and count \# that are marked (R)

## So....

## N (number in population) $=\mathrm{S} x \mathrm{M} / \mathrm{R}$

i.e.
$N=$ number in second sampling $X \quad \begin{aligned} & \text { originally marked } \\ & \text { recovered marked }\end{aligned}$

## So how do we model population growth?

## Growth Rate Examples

| Organism | $r\left(\right.$ day $\left.^{-1}\right)$ | Doubling Time |
| :--- | :--- | :--- |
|  |  |  |
| Bacteria | 58.7 | 17 min |
| Beetle | 0.101 | 6.9 days |
| Rat | 0.0148 | 46.8 days |
| Cow | 0.001 | 1.9 years |
| Birch Tree | 0.00075 | 25 years |
