# Massachusetts Institute of Technology <br> Department of Electrical Engineering \& Computer Science <br> 6.041/6.431: Probabilistic Systems Analysis 

(Fall 2010)

## Recitation 12

October 19, 2010

1. Show $\rho(a X+b, Y)=\rho(X, Y)$.
2. Romeo and Juliet have a date at a given time, and each, independently, will be late by amounts of time, $X$ and $Y$, respectively, that are exponentially distributed with parameter $\lambda$.
(a) Find the PDF of $Z=X-Y$ by first finding the CDF and then differentiating.
(b) Find the PDF of $Z$ by using the total probability theorem.
3. Problem 4.16, page 248 in text.

Let $X$ and $Y$ be independent standard normal random variables. The pair $(X, Y)$ can be described in polar coordinates in terms of random variables $R \geq 0$ and $\Theta \in[0,2 \pi]$, so that

$$
X=R \cos \Theta, \quad Y=R \sin \Theta
$$

Show that $R$ and $\Theta$ are independent (i.e. show $f_{R, \Theta}(r, \theta)=f_{R}(r) f_{\Theta}(\theta)$ ).
(a) Find $f_{R}(r)$.
(b) Find $f_{\Theta}(\theta)$.
(c) Find $f_{R, \Theta}(r, \theta)$.
4. Problem 4.20, page 250 in text. Schwarz inequality. Show that for any random variables $X$ and $Y$, we have

$$
(\mathbf{E}[X Y])^{2} \leq \mathbf{E}\left[X^{2}\right] \mathbf{E}\left[Y^{2}\right] .
$$
