第二課 Dì-èr kè Lesson 2

他一我百,他十我千。

Tā yī wǒ bǎi, tā shí wǒ qiān. Others 1 me 100, others 10 me 1000. Describing one's determination to outdo others to succeed.

2.1 Review

Fántĭzì 'traditional characters'

甲	Z
今天很熱!	很熱!你吃飯了嗎?
還沒,我不餓,今天太忙了。	我也很忙。你累嗎?
今天好了, <u>但是</u> 昨天很累。	小李已經上班了嗎?
已經上班了。	哦,上班了.
明天有課嗎?	没有,你呢?
明天三十 <u>號</u> 嗎? 沒有; 三十號 沒有,一號有。	我呢,三十號有課,一號也 有課!
你太忙了!	我們都很忙!

2.1.1 Compound characters

As noted in Unit 1, the majority of characters can be resolved into two immediate constituents which, allowing for minor modifications, can stand alone as characters in their own right. The configuration of constituents can be horizontal (很), vertical (李), or clustered (国/國 guó 'country'). The most recurrent of these constituents serve as tags for classifying characters into groups for purposes of retrieval (in dictionaries or filing systems, for example). Thus, compound characters with the component $\Box \underline{kou}$ 'mouth; entrance' can be grouped together: 吃, 吗, 喝, 呢; or those with $\overline{s}/\overline{\iota}$ yán 'speech': $\overline{\mathfrak{U}}/\overline{\mathfrak{U}}$, $\overline{\mathfrak{s}}/\overline{\mathfrak{k}}$, $\overline{\mathfrak{s}}/\overline{\mathfrak{s}}$, $\overline{\mathfrak{s}$

Note: Where the combining form of the radical cannot be printed on it own, the equivalent free form - if one still exists - is given in parentheses; if no free form is current, the parentheses enclose a blank.

radical character	general meaning	Chinese name	examples
木	wood; tree	mùzìpáng	林
		mùzìtóu	李
	mouth; opening	kŏuzìpáng	嗎/吗,呢,吃
日	sun	rìzìpáng	昨,明
言儿	speech	yánzìpáng	課/课
女	woman	nǚzìpáng	她,姓
(人)	man; person	rénzìpáng	他,你,們/们
(水)	water	sāndiănshuĭ 3 dots water	没
()		tóngzìkuàng 'tong'-character-frame	周,(同)
(辵)	movement	zŏuzhīpáng	還/还
食/它	food	shízìpáng	餓/饿,飯/饭
(心)	heart	shùxīnpáng vertical-heart-beside	忙
糸	silk	jiǎosīpáng twisted-silk-beside	經/经
(火)		sìdiănshuĭ four-dots-water	熱/热
彳		shuānglìrén double-stand-person	很,得(dé)

2.2 First set

Figure 1: 押 yā 'pawn; pledge; mortgage' – the sign for pawn shops.

Notes

a) 是 'be the case', like 明 and 昨, assigns 日 'sun' as radical (in this case combined vertically with \mathcal{R}). One [nonsense] account of the graph goes: 'the sun, over the horizon (the horizontal stroke) feeding sustenance ('being') through the vertical pipe – with a valve – to mankind (人)'.

b) The graph 女, said to originate as a drawing of a woman, appears as 'radical' in 姓 <u>xìng</u> 'surname<d>', 她 <u>tā</u> 'she; her', and 好 <u>hǎo</u> 'good'. 男 'man; male' is a compound graph, with the elements 田 <u>tián</u> 'field' and 力 <u>lì</u> 'strength' arranged vertically (looking vaguely like a 'man working in the fields'.) In colloquial speech, <u>nán</u> and <u>nǚ</u> appear in compounds such as <u>nánde</u> and <u>nǚde</u>, with <u>de</u> representing the possessive and attributive marker (ie, 'the male one' and 'the female one').

c) 第 <u>dì</u> introduces the 'bamboo' radical, which when appearing on top is called <u>zhúzìtóu</u> 'bamboo-character-on top'. The radical appears in graphs associated with bamboo (eg 筷子 <u>kuàizi</u> 'chopsticks') or with properties of bamboo such as segmentation (節/节 jié 'segment; program') or splitting (笑 <u>xiào</u> 'laugh'). The 'body' of 第 contains 弓 <u>gōng</u> 'a bow', which appears as the assigned radical of 張/张 <u>zhāng</u>.

d) $\psi \underline{xiao}$ 'small' is to be distinguished from $\psi \underline{shao}$ 'few'. The stroke order is dominant (the <u>gou</u>-stroke), followed by left and right <u>dian</u> – as in the body of % <u>ni</u>.

e) The surnames: 馬 'horse', originating as a drawing of the animal, is used for its sound value in 嗎 and 媽, but is assigned as radical in graphs used for words connected with horses, such as 馳 <u>chí</u> 'to speed; gallop' or 騎 <u>qí</u> 'to straddle; ride' (cf §2.6.5 below). The graph 陳/陈, also a surname, contains 東/东 <u>dōng</u> 'east' (use for its sound value) and a radical called 'left ear' in Chinese: <u>zuŏ'ěrduō</u>. Its right hand counterpart, seen in 都 <u>dōu</u>, is called <u>yòu'ěrduō</u> 'right ear' and is considered a different radical (and in fact, has a different source character historically). 張/张, the last of the three surnames introduced in this set, contains 弓 <u>gōng</u> 'a bow' (seen in 第), and 長/长 <u>cháng</u> 'long', used for its sound value. f) The right hand element of 誰, 隹 (pronounced <u>zhuī</u> on it own), which occurs in a family of characters that includes 推 <u>tuī</u> 'push' (cf §2.8), should be noted as '8 strokes' in order to distinguish it from another commonly occurring element in compound characters, 佳 zhù 'live', with only 7.

g) The element on the left of 這 (sometimes printed with two dots instead of one) is a left-side version of a more complex graph, 定, whose meaning is 'stopping and starting'. As a radical, it goes under the name of <u>zǒuzhīr</u>, and appears in graphs such as 逆 <u>yíng</u> 'welcome' and 近 jìn 'near'. 言, which is given radical status when it appears on the left of the graph (or at the bottom), forms the core in this case. Notice that when it is a core element, 言 does not simplify to ì as it would if it were the radical; instead, the graph $\dot{\chi}$ <u>wén</u> 'language' (see §2.3 below) is used (这), presumably because its first two strokes match those of 言. h) 者 <u>zhě</u> is the root element of a set that includes 都 <u>dou</u>, 煮 <u>zhů</u> 'to boil' and 堵 <u>dů</u> 'to obstruct'. (Can you identify the radicals of each?) Though there is no simplified version of 都, the element on the right (<u>yoù'ěrduo</u>) which is assigned as its radical, is written with three strokes in the traditional set, but only two in the simplified. A [nonsense] account of the graph, 都, goes: ' \pm 'earth' over 日 'sun', connected by a line (1) to suggest 'all; everything', with the '3' at the right indicating 'all' 3 states of matter.'

Compounds

是不是	男的	女的	第一	第三	很小
shì bu shì	nánde	nŭde	dì-yī	dì-sān	hěn xiǎo

Exericise 1

Refer to the table to answer the questions below:

<u>第—x?</u>	姓?	男/女?	?
第四	姓马	是男的	很饿,还没吃饭呢。
第七	姓毛	是女的	不饿,已经吃饭了。
第一	姓王	是女的	还没上课呢。
第九	姓张	是男的	吃饭了,但是还没上班。
第二	姓周	是女的	很忙,也很累。
第五	小马	是女的	很累,还没上课。
第三	小陈	是男的	昨天很累,今天好了。
第六	姓白	是男的	今天没有课。
第八	姓林	是女的	还没下班。
第十	姓李	是女的	已经吃了,不饿了。

Questions

1 °	谁是第一?	第一是男的吗
2 °	第二是不是姓李?	第二忙不忙?
3 °	第三姓陈吗?	他今天很累吗?
4 °	第四是男的吗?	他吃饭了没有?
5 °	第五是不是小白?	她上班了吗?
6 °	第六是男的吗?	他今天忙不忙?
7 °	第七姓马吗?	她吃了没有?
8 °	第八是女的吗?	她下班了没有?
9。	第九已经上班了吗?	他吃了吗?
10 °	第十也吃了吗?	她姓陈吗?

2.3 Second set

3+13 5+0

6+0

lăo

old

3+5 xué shēng study; school pupil

3+7

點兒

12+5 2+6

4+5

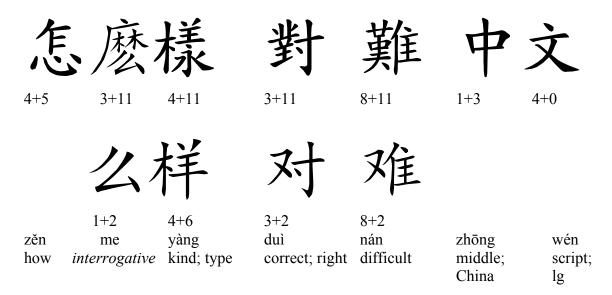

diăn

3+3 shī teacher

2+0 ér > r point; bit

diminutive

Ι

Notes:

(a) A nonsense account of \mathcal{P} goes: 'a child looking at a blackboard on a stand; the backboard has two x's, each registered on both sides'. For \pm 'be born; pupil': 'three horizontals represent the three stages of life – youth, maturity, old age, with the first marked (with a <u>piě</u>) as the time of education'.

(b) 老 ('old') is itself a radical (as indicated by the numerical designation, 6+0), though one occurring in very few characters. To be distinguished from the left-hand side of 都. Think 'elderly person taking a rest under an awning'. 師/师, with $\hat{\tau}$ 'cloth' (3 strokes) designated the radical: 'teacher wearing a mortar-board, standing before a podium covered by a cloth.' (The right-hand element of 師/师 – the podium – has a clear top, unlike the graph $\hat{\tau}$ shì 'market; city', which has an extra dot.)

c) In 點, 占 is phonetic (cf. 店 <u>diàn</u> 'shop') and the radical is \mathbb{X} <u>hēi</u> 'black' (with the 4 dots, a combining form of the fire-radical); hence 'specks [of soot]' and 'a little bit'. 兌, originally a picture of a child with a large head, appears in compounds such as 兌子 <u>érzi</u> 'son' and 女兌 <u>nǚ'ér</u> 'daughter' and has a root meaning of 'child'. 兌 is one source of the noun suffix *-r* (seen in words such as <u>yìdiǎnr</u>).

d) 怎 and 咋 are members of a phonetic set based on the element 乍 <u>zhà.</u> 麼 is simplified by letting a part of the original stand for the whole: 麼 > 么. In the traditional form, the lower right element has two slightly different variants: 麼 and 麼. A nonsense account: 'a shed (广), 2 trees (林), and a nose (么) sniffing them to find out WHAT they are'. 樣 <u>yàng</u> consists of 木 as radical (<u>mùzìpáng</u>), ¥ <u>yáng</u> (a phonetic element), and 永 <u>yǒng</u>; possibly originally referring to a wooden mould, thence 'type; kind'.

e) In both 對 > 对 and 難 > 难, the complicated left hand elements are replaced with the simple 又 (<u>yòu</u>). In 難, 住(<u>zhuī</u>) is assigned as radical; in 誰, 言 is

radical, 住 is phonetic (zhuī / shuí ~ sheí). The left-hand side of 難 shows 夫 inserted through a flattened \Box .

f) $\dot{\mathbf{x}}$ wén originally meant decoration (and was probably a drawing of a design); later it came to mean written language, and is now often used for language in general. The earlier meaning of 'decoration' is now represented by $\dot{\mathbf{x}}$ wén (with the silk radical).

Compounds

Figure 2: Hong Kong: 藥/药 yào 'medicine'

Exercise 2

- 第一: 她姓毛,是女学生;今天有一点儿累。
- 第二: 他姓陈,是男学生;他有一点儿忙。
- 第三: 他姓张,是大学的老师;今天是第一天,他很忙。
- 第四: 她姓白,是小学的老师;昨天很累,可是今天好了。
- 第五: 她姓林,是中学的老师;今天没有课。
- 第六: 他姓周,是男学生;是张老师的学生。
- 第七: 他姓马,是男学生;今天有点儿饿,还没吃饭呢。
- 第八: 她姓王,女的;是老师,昨天是她的生日。
- 第九: 他姓林,男的;中文老师,还没上班。
- 第十: 她姓李,女的,学中文;中文不太难。

Questions

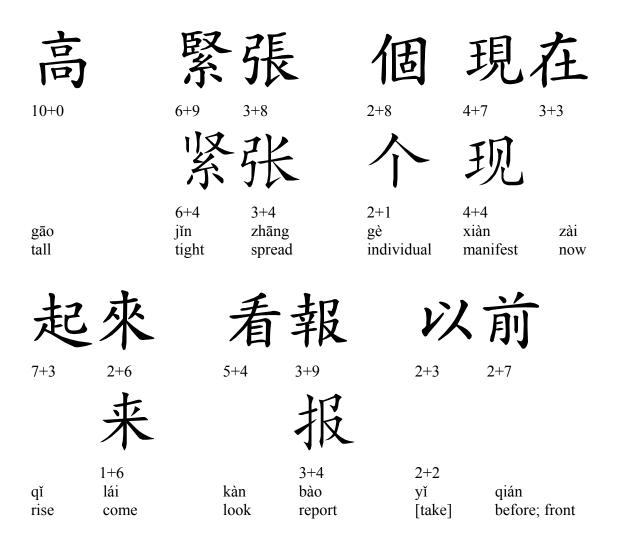

1. 姓马的是男的,对吗?

- 2. 姓毛的是不是学生?
- 3. 姓周的没有老师,对不对?
- 4. 姓张的是小学的老师, 对吗?
- 5. 姓白的今天很累,对吗?
- 6. 姓林的已经上班了, 对吗?
- 7. 姓马的今天怎么样?
- 8. 今天是王老师的生日, 对吗?
- 9. 姓张的今天怎么样?
- 10. 谁是学生, 谁是老师?
- 11。姓林的是男的还是女的?
- 12。老师是不是都是男的?

生字 shēngzì 'vocabulary (raw-characters)'

姓马的	xìng Mǎ de [rén] 'the one named Ma'; 姓林的, etc.
小学	xiăoxué 'elementary school'
中学	zhōngxué 'high school'
大学	dàxué 'university'
生日	shēngrì 'birthday'
还是	háishi 'or' [with choice questions]

2.4 Third set

但	可	那	哪	走
2+5	3+2	3+4 / 2+4	3+7 / 3+6	7+0
dàn	kě	nà; nèi	nă; něi	zŏu
but	able	that	which	walk; leave; go

a) 高 gao, used as a surname, but also a SV 'tall'; think of the graph as representing 'a tall structure (with a flat roof and a chimney)'. b) 緊張/紧张. Recall the radicals: 糸 the silk radical (twisted); and 弓, representing a bow (under tension). Both suggest 'tension or anxiety'.

c) 个, the simplified version of 個, is an old handwriting form elevated to formal status in the new simplified set.

d) 現 (like 班 and many other graphs) contains the element 王 as radical. Though the element is virtually identical with the surname 王 Wáng ('king'), it actually derives from the combining form of a different character: 玉 yù 'jade' (found intact in the simplified 国 guó 'country'). So traditionally, the radical is called <u>yùzìpáng</u> 'jade character at the side'; but on the Mainland at least, it is also called <u>wángzìpáng</u> 'king on the side'.

e) 起 contains 走 as radical and 己 <u>jǐ</u>, as phonetic; cf. graphs such as 超 and 越 which are formed along the same lines. ∞ , originally a drawing of a kind of cereal grain, cf. 麥 <u>mài</u> 'wheat', which is now differentiated from ∞ by the lower radical element. The meaning of 'come' may represent a metaphorical extension (grain > sprouting > coming out); or the graph may have been borrowed to represent a near homophone.

f) 看 contains 手 'hand' and 目 'eye' (both of whose earlier forms suggest drawings); hence 'hand over the eyes, looking'. 報/报 bao 'report; newspaper', with the right-hand component looking like 'a comfortable armchair where you might read the paper'. (Note the symmetry of the left-hand side of the traditional graph.)

g) 以 <u>vǐ</u> has 人 as its radical. In the modern language, the syllable is a common 'bound form', occurring in words such as 可以 <u>kěyǐ</u> and 所以 <u>suǒyǐ</u>; but in the classical language, it appears as a verb with the meaning of 'take'. So 以前 is literally 'take as before'. In the simplified set, 以 is written with 2 strokes.

f) 那 <u>nà</u> 'that', with <u>yòu'ěrduō</u> 'right-ear' (or <u>yòu'ěrpáng</u>) assigned as radical (cf. 都). 哪 <u>nă</u>, the question word, has <u>kǒuzìpáng</u> as its radical.

Compounds

Exercise 3

Answer the questions at the end, taking your cue from the information given in the 'chart' below. Note that the chart takes the form of lists: '3 students: 1 male, 2 female'. The questions (like your responses) have the form of sentences: 'The students are all female, right?'

第一:	三个学生,一个男的,两个女的;
	他们都已经起来了,可是还没看今天的报。
第二:	一个学生,一个老师,都是男的;
	她们以前很累,但是现在好了。
第三:	两个老师,一个中文老师,一个日文老师;
	他门已经下班了。

第四: 一个中文学生,没有老师;

中文很难,他很累。

- 第五: 四个学生,都很紧张; 都是陈老师的学生。
- 第六: 五个学生,两个老师; 学生很紧张,老师很忙。
- 第七: 一个男的,一个女的;

男的起来了还没吃饭呢;女的已经走了。

- 第八: 两个学生,一个对,一个不对; 一个是 MIT 的,一个不是。
- 第九: 两个学生,一个姓张,一个姓高。 姓张的很紧张,可是姓高的还好。
- 第十: 十个学生,都是张老师的学生。
 张老师的学生很忙也很累。

Questions

- 1. 第六,学生,老师都很紧张吗?
- 2. 第二,他们还是很累吗?
- 3. 第三,那两个老师是中文老师吗?他们下班了没有?
- 4. 第八, 谁对, 谁不对?
- 5. 第四,学中文,没有老师,难不难?
- 6. 第十,谁的学生都很忙很累?
- 7. 第五,那四个学生怎么样?
- 第一,学生都是女的,对吗?今天的报看了,但是昨天的 还没看,对不对?
- 9. 第七,他们两个已经走了,对吗?已经上课了。
- 10. 第九,姓陈的是学生但是姓张的不是,是老师,对吗?

2.5 Fourth set

a) Simplification is not a new process; it has been going on since the creation of the writing system. It continues even in the traditional set. The first character of $(\uparrow \underline{\&}, for example, is an older simplification of \underline{*} that substitutes the phonetically close + for the more complicated original, then marks it with <u>rénzìpáng</u>. The <math>\Leftrightarrow$ of \Leftrightarrow \pounds is another substitution that has gained currency in the traditional font as an alternative for original $\underline{\&}$. Both simplifications have a long history, and have

now gained acceptance in Taiwan and traditional communities. Both can now be used in the traditional set.

b) East, in its traditional form (東) shows 'dawn in the east, with the sun (日) coming up through the trees (木)'. The characters, 東西/东西, suggest that the compound is derived from 'east-west', ie the plane of existence, 'where all things are'. 東 was employed as a phonetic element in 陳, and the relationship remains in the simplified set: 东/陈.

c) 手 'hand', itself a radical (with a pictographic origin), has a rather different combining form, seen on the left of characters such as 报,把,拉,押. The traditional version of the two graphs (機/机), with its complicated right-hand element, is more suggestive of the meaning 'machine'. (Cf. 飛機/飞机 feījī 'airplane'.)

d) 書 consists of 聿 <u>yù</u> 'a writing implement' and 曰, the latter, distinct from 日. In 筆, 聿 is determined by the element at the top, the bamboo radical (a combining version of 竹 <u>zhú</u> 'bamboo'; early writing implements – brushes – were made out of bamboo). 包, whose root meaning is 'to wrap' or 'a bundle', looks a bit like a bundle.

e) The rule of 5: characters like 書(or 筆 bǐ 'writing implement' that also contains \pm), which exhibit many horizontal layers are sometimes difficult to resolve. Fortunately, for many such graphs, the RULE OF 5 applies. The rule of 5 (for characters) states that if the character seems to have a lot of horizontal levels, it has five! Boxes count as one layer; boxes with an internal horizontal (日) count as 2, etc. 書 (as well as 聿, 筆) is an example; so is the left-hand side of nán 難 (the top counts for 2, the box 1 and the lower horizontals, another 2, for a total of 5). f) The traditional form 車, originally a drawing from overhead of a cart, is itself a radical (appearing in characters such as 輪, 輛, 軟). The graph 子 zǐ (distinct from $2 \frac{1}{2}$ (written character) was originally a drawing of a child. If fully toned, it generally means 'young; child of; seed of': 王子 wángzǐ 'prince (king's son)', 天子 tiānzǐ 'emperor (son of heaven)', 松子 sōngzǐ 'pine nut (child of pine)', 蝦 子 xiāzǐ 'shrimp roe (child of shrimp)'. However, in its untoned form, 子 acts as a noun suffix, appearing with nouns that refer to things from everyday life: 桌子 zhuōzi 'table'; 椅子 yǐzi 'chair'; 鼻子 bízi 'nose'; 板子 bānzi 'spanner; wrench'. g) $\frac{1}{2}$ both look like umbrellas.

h) 貴/贵 guì 'expensive' introduces the important element $\[mathbb{1}/\[mathbb{0}]$ bèi, a graph that is said to originate as a drawing of a cowrie shell, used as currency along the southwest coast of China in ancient times. $\[mathbb{1}/\[mathbb{0}]$ appears as radical in characters for many words having to do with transactions, such as g mǎi 'buy', 賣 mài 'sell' and 寶 bǎo 'valuable'.

i) 字 \underline{zi} 'characters' (perhaps 'a child, 子, under a roof, studying characters'). 典 is said to be composed of 册 'classic books' on a stand, suggesting 'a repository of information'.

j) 行 is its own radical (said to have originated as a picture of crossroads). It generally combines with other elements placed internally, eg 街, 衍. The core meaning of <u>xíng</u> is 'street; walk', or by extension, 'to work (of machines)', 'be okay' etc. The same graph is also used for <u>háng</u> 'row', and by extension (via things that are arranged in rows), 'firm; business', eg 銀行 <u>yínháng</u> 'bank (silverbusiness)'. The word has entered English historical writing, from Cantonese, as 'hong', meaning 'factory; warehouse'.

7.	周老师有什	乙样的字典	?	8.	李明白	的伞怎么样?
9.	有书的姓什	么?		10.	您贵女	丝?

你是不是学生? 11.

2.6 Form of characters

Traditionally, Chinese characters are subdivided into six categories according to the way they are thought to have been formed. These categories are called the 六書 liù shū 'six scripts', and include graphs that are derived from drawings (like 馬 mă 'horse' the earliest versions of which look quite like horses), those that are formed as indications (like 上 and 下, which represent meaning diagrammatically), or those that are borrowed (like the graph π which was borrowed to represent a word of near identical sound, like 4 in the shorthand 4U.)

Though the 'six scripts' are sometimes claimed to be descriptive, in fact it requires considerable historical knowledge to decide to which type a graph belongs. For the beginner, seeking a way to gain a foothold on the sheer face of the [written] language by trying to rationalize the relationship between the sound/meaning of a word and the form of its character, there are only two useful kinds of relationship. One is pictorial, or representational: the shape of the character suggests its meaning; 上 'on', 下 'under', 中 'middle', 心 'heart'. The other is relational: the character resembles another of the same or similar sound: 嗎 <u>ma</u> 'Q', sounds like 馬 <u>mă</u> 'horse' or 媽 <u>mā</u> 'mother'. These two types can be labeled 'representational' and 'phonosemantic', respectively. The former are often cited for their pictorial qualities; but it is the latter – the phonosemantic – that are the most common. New characters are almost always created on the phonosemantic model (cf. Unit 3 Characters).

2.6.1 Representational characters

As noted earlier, compound characters are those that can be decomposed into constituents that are themselves characters (or combining versions of characters). Non-compound characters, such as ψ , \clubsuit or Ξ (or the parts of compound characters such as \pm , \pm , \pm and \exists) can be called 'simplex'. It is probably true that most simplex characters derive ultimately from drawings or indications that relate to the original meaning of the graph. The following characters all have forms that can be rationalized fairly easily in terms of their meaning:

-	ニ	Ξ	上	下	中		ら	必	火	雨
yī one	èr two		shàng on		U		xīn heart	bì must	huŏ fire	yŭ rain
米 mǐ rice	mù		shān	tŭ	chā	gōng	鱼/魚 yú fish	鸟 niž bir	ío	伞/ 傘 sǎn umbrella

A particular graph can be viewed as representational regardless of whether the historical data supports the notion. Thus, if you agree that $\frac{2}{4}$ săn 'umbrella' looks [vaguely] like an umbrella, then you are regarding it as representational – and that image can be of use in helping you recognize it. Similarly, once the graph for <u>xīn</u> 'heart' is known, ie $\frac{1}{2}$, then $\frac{1}{2}$ <u>bi</u> 'must; have to' can be viewed as representing the notion of obligation as 'a line crossing the heart'. Conversely, the pictorial features of the graph for <u>xiàng</u> 'elephant', , may not be evident until someone makes the connection either by citing a more realistic earlier graph, or by drawing attention to a trunk, head, body, tail, etc.

Beginning students show great skill at creating nonsense etymologies (even for compound characters). Thus the character $\mathfrak{R} \underline{k} u$ 'to cry' is seen as 'two eyes and a tear'; or $\mathfrak{T}/\mathfrak{U} \underline{dian}$ 'electricity' is seen as 'an appliance with an electrical cord running out the bottom'. Or – more extreme – \mathfrak{P} (\mathfrak{L} in simplified form) 'to be able; capable' (among other meanings) is seen as Darth Vader, complete with helmet and breathing equipment – a man of impressive *capabilities*. But while it is useful to find representational elements

in complex characters, it is often not possible even with a high degree of creative license. There is not much to be said for, say, $\not \ge \underline{pi}$ 'skin', $\not \propto \underline{yi}$ 'clothes', or $\not \le \underline{dou}$ 'beans'. They are simplex (and may well derive directly from representations) but their forms are difficult to account for without historical research – or a very creative imagination.

2.6.2 Additive characters – or blends

A small set of compound graphs can be interpreted as semantic blends, in which the meaning of the whole seems to be related to both its parts. Occasionally, as in the (b) examples, both meaning and sound are involved.

a) Semantic blends

尖 jiān 'sharp', made up of 小 xiǎo 'small' and 大 dà 'big', ie 'wedge shaped';

忠 zhōng 'loyal', made up of 中 zhōng 'middle' and 心 xīn 'heart';

信 <u>xìn</u> 'believe; letter', made up of イ rén 'person' and 言 yǔ 'language';

孕 yùn 'be pregnant', made up of 乃 năi 'exist' and 子 zǐ 'child';

好 <u>hǎo</u> 'be good; well', made up of $\pm \underline{n} \underline{\check{u}}$ 'woman' and 子 <u>zǐ</u> 'child', ie the paradigm of 'goodness';

尿 <u>niǎo</u> 'urine' made up of P <u>shī</u> 'body' and 水 <u>shuǐ</u> 'water';

屎 shǐ 'shit' made up of P shī 'body' and 米 mǐ 'rice [grain]'.

b) Blends of sound and meaning (rare)

育 béng 'no need to', made up of 不 bú 'not' and 用 yòng 'use'.

乒乓 <u>pīngpāng</u> 'pingpong', whose graphs represent a pingpong table, but which also take their sound from the graph, 兵 bīng 'soldier'.

Blends are one of the traditional character types (one of the <u>liùshū</u>), but most cases represent more of an apparent than a real historical process of character creation. As with the simplex characters, students and teachers frequently ignore the historical facts and enlarge the category of blends with their own etymologies: $\pounds \underline{ming}$ 'name' from $\oint \underline{x}\overline{i}$ 'evening' and $\Box \underline{k}\underline{o}\underline{u}$ 'mouth', explained as 'at dusk, you have to call out names to identify people'; or $\oint \underline{d}\overline{o}\underline{n}\underline{g}$ 'east', made up of $\exists \underline{n}$ 'sun' superimposed on $\bigstar \underline{m}\underline{u}$ 'wood' (originally 'tree') and explained as 'sunrise through the eastern trees'; or $\bigstar \underline{b}\overline{e}\underline{i}$ 'cup', made up of $\bigstar \underline{m}\underline{u}$ 'wood' and $\bigstar \underline{b}\underline{u}$ 'not', because 'cups aren't make of wood'.

2.6.3 Phonosemantic characters

Once the repertoire of characters begins to grow, it becomes more efficient to relate characters not to things (their referents), but to each other. Thus, as noted earlier, once 馬<u>mă</u> 'horse' is learned, then it is easy to relate it to 嗎<u>ma</u> 'Q', or 媽<u>mā</u> 'mother' – or eventually to 螞 <u>mă</u> 'ant' and 碼 <u>mă</u> 'number'. The historical process that gives rise to such 'phonetic sets' is borrowing, followed by specification: 馬 is borrowed to write words similar in sound (mother, ant, number, etc.); then to prevent confusion, the graph is specified (or particularized) by the addition of a classifying character (\Box , \bigstar , Ξ or \pm , etc.)

Many phonetic sets are quite regular, like the 馬 set, or the following set based on 青 qīng (which, as a free form, means 'green' or 'young'):

請,	情,	睛,	清	, 氰,	蜻 ,	鯖
1 0	1 0		1 0	qíng hydrogen	10	1 0

In some cases, phonetic correspondences that were once regular have been obscured by historical changes in the language; such is the case for \mathfrak{R} and \mathfrak{X} , or \mathfrak{R} and \mathfrak{R} , where the pronunciation of members of the set (\underline{e} and \underline{w}), in the first case, <u>chén</u> and <u>dong</u> in the second) remains close but no longer identical. But even the 'irregular' sets show patterns of correspondence, as illustrated by the set based on $\underline{\bullet}$ below, which either begins with <u>zh</u> or with <u>d</u>.

重,	種,	踵,	腫	,	動,	懂,	董
zhòng	zhŏng	zhŏng	zhŏng		dòng	dŏng	dŏng
heavy	category	heel	swell		move	understand	to lead

The common sound elements are often called *phonetics* (<u>shēngpáng</u> in Chinese); and the specifying elements are called *radicals* (<u>bùshǒu</u>) – even though it is usually the phonetic elements that represent the historical root and the radicals, the additions. As shown at the beginning of this lesson, radicals do have concrete meanings (言 'speech', 心 'heart', 日 'sun', 水 'water' etc.), and initially the selection of a particular radical to form a compound character would have been inspired by meaning. But in many cases, the original impetus has been obscured by linguistic and cultural change. The presence of the water radical in 海 'sea', 河 'river' and 洗 'wash' reflects a connection with water; but its presence in 漢 Hàn 'Chinese', 溫 wēn 'warm' and 活 huó 'to live' is harder to explain. Ultimately, the function of radicals in compound characters is one of differentiation: 活 is not 适 or 括; 漢 is not 難, 噗 or 艱.

2.6.4 Character retrieval

Alphabetic writing systems, regardless of the regularity of their spelling, make use of relatively few symbols, so ordering titles for filing systems or words for dictionaries is a

matter of alphabetization – establishing an order for the symbols and remembering it. For character writing systems, in which the number of symbols ranges in the thousands, retrieval is much more problematical.

The most common method of ordering characters (and ultimately, retrieving them) was suggested by the large number of compound characters that arose from processes of borrowing and specification described above. Compound characters could be grouped by radical, and then subgrouped by number of additional strokes (the second of the figures written under each large-format characters introduced in the sets of characters in each lesson). Thus 請 could be found under the speech-radical, 言, amongst those characters with 8 (additional) strokes; 蜻 would be under the insect-radical, \pm , 8 strokes, etc. Simplex characters that were themselves radicals (such as 言, 日, 气, 魚) would be listed at the head of their own set. Other simplex characters were brought into the same system by designating parts of their graphs – sometimes rather arbitrarily – to be radicals. Thus 中, 兆, 甲 (all simplex) are assigned the radical | (the vertical stroke called <u>shù</u>); 也 is assigned the radical \angle (even though the character does not contain a stroke of that shape); 元 is assigned \mathcal{L} , and so on.

Eventually, by *Qing* times (with the publication of the great 'Kangxi' dictionary), the number of radicals was settled at 214, ordered by stroke totals. Students of the language, like literate Chinese, who had to be able to look up characters efficiently or search through indexes ordered by radical, came to know the radical chart virtually by heart. Because of their important classificatory role, and because they are stable (each character having one radical assigned to it) and of fixed number, introductory textbooks have tended to focus on radicals (noting general meanings where possible) rather than phonetic sets. Yet both are useful, and in fact, the information on pronunciation obtained from phonetic elements is probably more useful to the learner (in allowing quick dictionary searches, for example) than the information on meaning provided by radicals (which is often too general to be of much use).

The radical system of retrieval is not the only one in use, but it remains one of the more popular systems for looking up characters in dictionaries or other reference works in cases where the pronunciation is not known. Adoption of the simplified set of characters was accompanied by some changes in the assignment of radicals, and altered the arrangement and number of radicals in the chart. The new system has 189 rather than the traditional 214.

The main difficulty in using the radical system is identifying the radical – particularly in simplex characters which are not themselves radicals and which were assigned a radical to make them conform to the system. Nowadays, most dictionaries are organized alphabetically by the *pinyin* pronunciation of the first character, but they also contain lists organized by radicals that allow you to look up characters when the pronunciation is unknown. But only one dictionary, *The ABC Chinese-English Dictionary* (cited in the bibliography), is organized by pinyin and word (rather than character), so that words (rather than characters) are ordered uniquely, irrespective of the particular character of the first syllable.

2.6.5 An illustration

The couplet illustrated in figure 3 below was observed on a shop door in the city of *Zhenjiang*, not far downstream from *Nanjing*. It provides some good examples of phonosemantic characters. Despite being a product of the Mainland, the 'scroll' reads vertically in the traditional fashion, right to left, ie Jùn jì ào chí, etc. Each character contains the now familiar element \mathbb{F}_7 , but this time, not as a phonetic, but as a radical, so that the set of characters shows no particular commonality of sound. Rather, they all refer to types of horses or to attributes of horses.

The word-for-word glosses below are only very rough indications of meaning. Each set of 4 characters in a column forms a sentence consisting of an adjective and a noun, followed by an adverb and a verb. The sense is one of aspiration and hope.

驤	駿	xiāng	Jùn	Adj	galloping	Outstanding
駒	驥	jū	jì	N	foal	fleet+horse
驩	熬馬	huān	ào	Adv	joyously	proudly
騰	馳	téng.	chí,	V	soars.	races,

The saying is not a well known one; in fact, though they would get the gist of the meaning, many Chinese would be hard pressed to say precisely what the difference was between a \underline{ju} and a \underline{jl} (the second characters of each [vertical] line).

Figure 3: Front door, Zhènjiāng, near Nánjīng.

Chinese encountering rare characters such as [some of] those in the couplet, are quite likely to make use of radical and phonetic to remind them of meaning and pronunciation, respectively. Students of the language need the hints even more. With some allowance for 馳 which needs to be referred to other compounds (池 chí, 弛 chí) rather than just the right-hand element (也 yě), the pronunciation of the phonetic element alone matches that of the compound (except in tone). Thus 驥 and 冀 are both pronounced <u>i</u>); 驁 is <u>ào</u>, 救 is <u>áo</u>, 骧 and 襄 are both <u>xiāng</u>, etc.

2.7 Miscellany:

a) Tone	e sets Jiǎntĭz	zì									
	老师		很好		再见		不热		很忙		不高
	紧张		还好		看报		不累		很难		上课
	Fántĭz	ì									
	緊張		還好		看報		不餓		很難		上課
	老師		很好		再見		不熱		很忙		不高
b) Tone	es	<u>甲</u>		<u>乙</u>		<u>丙</u>			<u>T</u>		
		不忙		很好		不太	累		忙吗?		
		不饿		很累		不太	好		紧张吗	?	
		不累		很忙		不太	忙		俄吗		
		不紧	张	很高		不太	高		好吗		
		不高		很饿		不太	饿		累吗		
c) Set 4 characters in fántĭzì											
	沒有	傘	沒有	筆	還沒法	起來	書包		她的書		什麼
	méiyou	săn	méiyou	bĭ	hái méi	qĭlái	shūbāo		tā de shū		shénme

2.7.1 Reading Practice

上車	字典	東西很貴	您好!貴姓?	手機
shàngchē	zìdiăn	dōngxi hĕn guì.	Nín hăo! Guìxìng?	shŏujī
那不行。	字典很貴	你的行李呢?	在這兒。	看書
Nà bù xíng.	zìdiăn hĕn guì	Nĭ de xíngli ne?	Zài zhèr.	kànshū

2.8 On the street #2

歡迎光臨

欢迎光临 huānyíng guānglín

welcome bright-presence Welcome [to you our] guests.

推拉 tuī lā push pull [written on doors]

公話

公话

gōnghuà public+speech public phone

空車/空车

kōngchē empty-vehicle [on taxis]

Notes

a) The formal expression for welcoming customers <u>huānyíng guānglín</u>, or thanking them <u>xièxie guānglín</u>, is often written on the entrances of shops (eg on entrance doors, on walls, on floors).

b) Pay phones in China (at least up until the current year of 2005) can be found on the street or in other public places. While they do accept coins, most customers make use of one of the many brands of phone cards that can be brought from newspaper stands and small shops (at about 30 - 50% or more below face value). However, people seem to prefer using the ordinary telephones that small shops make available for public use. These are announced by small signs with \Im if written on them. Normally, before making your call, you let the shopkeeper know the type of call (<u>shinèi</u> 'within the city', <u>shiwài</u> 'out of the city' or <u>guóji</u> 'international' – though the last are not always possible from shop phones). You are charged afterwards – fees are usually very modest.

c) 推 and 拉 exhibit the 'hand-radical', a combining version of 手, called <u>tíshǒupáng</u> 'raise-hand-beside'. It is associated with words having to do with manipulation.

21G.107 / 21G.157 / 21G.181 Chinese I (Streamlined) Fall 2014
